NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  struct Node* nn = (struct Node*)malloc(sizeof(struct Node));
  nn->item = item:
  if(!*head){
   *head = nn;
    return;
  struct Node* temp = *head;
  while(temp->next)
```

```
temp = temp->next;
   temp->next = nn;
    nn->prev = temp;
  void displayForward(struct Node* head) {
    struct Node *temp = head;
    printf("\n");
    while(temp){
      printf("%c ",temp->item);
      temp = temp->next;
    printf("\n");
void displayBackward(struct Node* tail) {
    struct Node* temp=tail;
    printf("\n");
    while(temp){
      printf("%c ",temp->item);
      temp=temp->prev;
    }
  }
  void freePlaylist(struct Node* head) {
    struct Node *temp=head->next;
    while(temp->next){
   free(head);
      head=temp;
      temp=temp->next;
  int main() {
    struct Node* playlist = NULL;
    char item;
    while (1) {
      scanf(" %c", &item);
      if (item == '-') {
        break;
      insertAtEnd(&playlist, item);
```

2176241801255

2176241801255

2176247801255

```
struct Node* tail = playlist;
while (tail->next != NULL) {
    tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}

Status: Correct

Marks: 10/10
```
